

-  Very clear course with cutting-edge equipment. Highly recommended even if you have previous experience in RTDS®.
-  Overall, very good training with relevant practical examples. Trainers are friendly and very professional. Very interesting and dynamic course. All the essentials to work with RTDS®. The National HVDC Centre was a very good host too!
-  Really interesting course to start using RTDS® equipment. Complete explanations about how the HW and the SW works starting with simple models and finishing with real converter replicas.
-  Full day course, from beginners' level to more advance applications on RTDS®, a good way to not just do the tutorials but also be able to ask in person about them.
-  I really enjoyed the training. It was very practical and interactive. The presenters were very helpful and friendly. Definitely a great way to start with real-time simulation.
